

May 30, 2007

Dear NITL Member:

As the importance of efficient supply chain solutions intensifies in today's global economy, the National Industrial Transportation League has entered into an agreement with TranSystems. The League believes that TranSystems' experience with shippers, freight railroads, trucking, ports and maritime shipping and air cargo carriers and receivers well qualifies TranSystems for careful consideration by League members in meeting their own transportation needs related to the following:

- Simulation/modeling to provide a better idea of the effectiveness of process changes or facility expansions being considered
- Engineering/architectural infrastructure design of rail, port, truck, air cargo and distribution centers for shippers and carriers
- Supply chain and logistics analyses and forecasts of domestic and international freight flows
- Security assessment, design, and program management for shippers and carriers alike

With offices across the United States, TranSystems provides all sectors of the transportation industry with services pertaining to architecture, engineering and planning; management and supply chain consulting; real estate; and security. Transystems will provide League members access to an array of professional services.

For more detailed information regarding TranSystems' capabilities please go to [www.transystems-nitl.com](http://www.transystems-nitl.com) or contact Rob Adams at 847-407-5249 or e-mail at [rbadams@transystems.com](mailto:rbadams@transystems.com).

Sincerely,

John B. Ficker  
President and CEO  
The National Industrial Transportation League
